

## **BACKGROUND INFORMATION DOCUMENT (BID)**

# **KwaZulu-Natal Coastal Management Programme**

### **THE PURPOSE OF THIS DOCUMENT**

To inform Interested and Affected Parties (I&APs) about the proposed Provincial Coastal Management Programme (PCMP) for KwaZulu-Natal (KZN), to provide a brief background on the proposed CMP and explain its aims and objectives, and to invite them to participate.

### **INTRODUCTION**

Coastal environments are a rich and diverse asset, providing valuable economic, social and ecological opportunities. As such they need to be carefully managed in order to ensure long-term sustainability. South Africa, following global trends, developed and enacted the Integrated Coastal Management Act (24 of 2008) and its subsequent Amendment Act (36 of 2014), hereafter referred to as the ICM Act. The ICM Act contains a variety of tools to ensure that the coastal zone will be managed co-operatively, of which the development of Coastal Management Programmes (CMPs) is key.

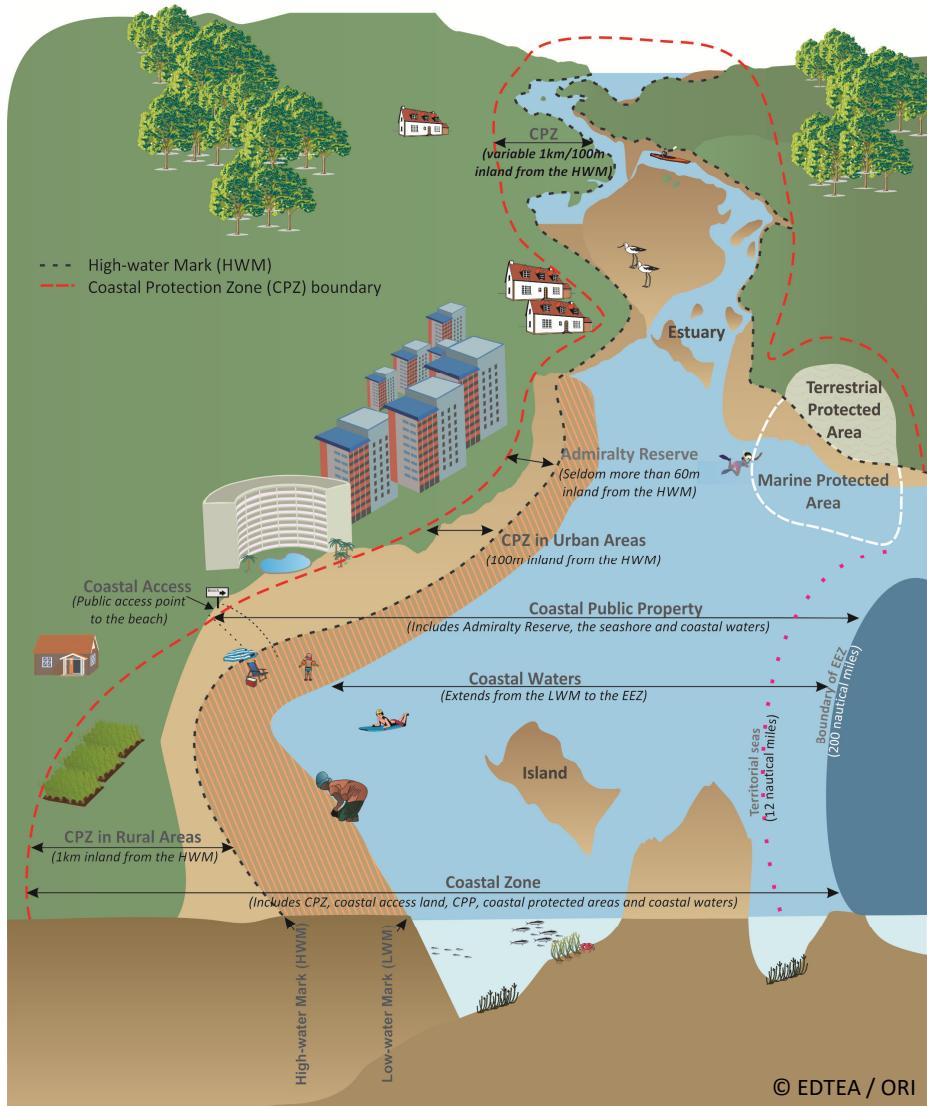

### **WHAT IS A PCMP?**

A PCMP is a provincial policy directive for the management of the coast through an integrated, coordinated, uniform approach, and includes strategies and plans for the effective implementation of the ICM Act. The PCMP provides direction for coastal management in KZN over a five year period and sets out goals and objectives for the achievement of ICM in the Province.

# THE COASTAL ZONE

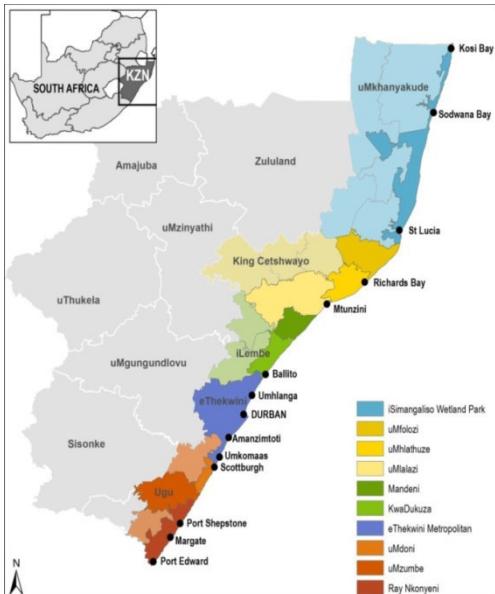

In terms of the ICM Act, the coastal zone is defined as “the area comprising coastal public property, the coastal protection zone, coastal access land, coastal protected areas, the seashore and coastal waters, and includes any aspect of the environment on, in, under and above such area”.

## SITUATION ASSESSMENT

The KZN coast stretches some 580 km from the Mozambique border, near Kosi Bay in the north, to the Mtamvuna Estuary on the border with the Eastern Cape Province in the south. The coast is shaped by a unique assemblage of physical features comprising climatic, geological and oceanographic characteristics. Collectively they create a distinctive coastal environment rich in social, economic and ecological resources.

For management purposes the KZN coast is divided into five Coastal Districts, broken up into nine Local Municipalities and the iSimangaliso Wetland Park .

## VISION & MISSION STATEMENTS FOR ICM IN KZN

### VISION

A vibrant, healthy and safe coast with sustainable access to resources for all.

### MISSION

Through co-operative governance and best practice the intrinsic value of the coast is protected, restored and enhanced for future generations, while promoting equitable access and sustainable use of coastal resources for all stakeholders and user groups.

This Vision and Mission are underpinned by a set of core principles to ensure they are achieved following international best practice. KZN has identified **nine priority areas** for implementation of ICM under the PCMP; these together with the vision and mission provide the primary policy directive for coastal management in KZN. Specific management objectives and actions are required in order to address these priorities over the short- and long-term. These are detailed in the CMP.

Priority Area	Goal
<b>Coastal Access</b>	Promote safe and equitable access to the coast
<b>Coastal and marine planning</b>	Promote balance between economic development and conservation of natural resources
<b>Coastal information &amp; research</b>	Promote relevant research and access to information
<b>Coastal vulnerability: adaptation and building resilient communities</b>	Promote resilience to the effects of climate change, dynamic coastal processes and natural hazards
<b>Cooperative governance</b>	Establish and strengthen institutional partnerships and mechanisms for ICM to facilitate better management
<b>Education, awareness and training</b>	Develop capacity and promote public awareness and education for integrated coastal management
<b>Estuarine management</b>	Undertake estuarine management which optimises the value of these systems on a sustainable basis
<b>Land &amp; marine-based sources of pollution</b>	Minimise the impacts of pollution and waste on the health of coastal communities and coastal ecosystems
<b>Monitoring, compliance and enforcement</b>	Monitor the State of the Coast (SoC) and promote compliance with coastal and other regulations
